Koramangala.

Back-end Developer

October 12, 2017

Overview

First up, congratulations for getting shortlisted into our scheme of things. Remember it doesn't end there. We are in search of a committed and self-driven Back-end Developer, who is passionate about learning new things, has analytical skills and is crazy over coding.

GOALS

1. To develop REST Endpoints for various projects.
2. To build & test Robust, Highly Scalable API's that minimizes latency and memory footprint.
3. To build a resilient DB system that handles automatic failure, replication and auto-scaling.

What you'll be doing?

- As a Backend Developer at Versalite, you'll be primarily writing server in Node.js, hosted in AWS with MongoDB.
- You are required to read the concepts and technology on the go and implement in real time.
- Versalite builds Enterprise Grade Apps for Business, so it is very imperative for you to document and optimize your routines at every step.

So, Interested To Work At Versalite?

Please refer to the task document for the tasks, complete it and revert us back with your maximum efficiency and creativity.
